

# Eco-Action Nursery Trust

Growing native plants suitable for native bird food and habitat within the Red-Zone.

We cultivate plants sourced from the nearby Travis Wetlands in satellite nurseries managed by schools and community groups. Throughout the year, we run events planting and mulching within the Christchurch Red-Zone.

In time, the plants we grow will form a corridor for native birds to return to the Christchurch city centre.

CCC Parks Ecologists have input as to species choice and location. Mulch is used to reduce herbicide use, and optimize water retention.

School students are taught ecological principles of environmentalism as well as getting practical hands on instruction in propagation and planting techniques.
